NAUTILUS

INNOVATION LAB

OUR GOAL

Improve the quality of human life and its adaptation to the environment by developing technological solutions inspired by nature.

OUR OFFER

Design sustainable products by using renewable energies producing environmental, social and economic benefits.

BRIGHTTREE

Structure that simulates a tree, integrating the supply of lighting and wireless internet access through the autonomous generation of renewable energy. BRIGHTTREE can be customized to provide shade, lighting and a source of power for electronic devices.

LOTUS WATER

A mechanical system for collecting rainwater in the shape of a lotus flower. The device opens when the rain starts and closes when the rain stops. The collected water goes through a filtration and purification process, resulting in safe water.

*Patent pending.
