

Better routes, even better results

About Us

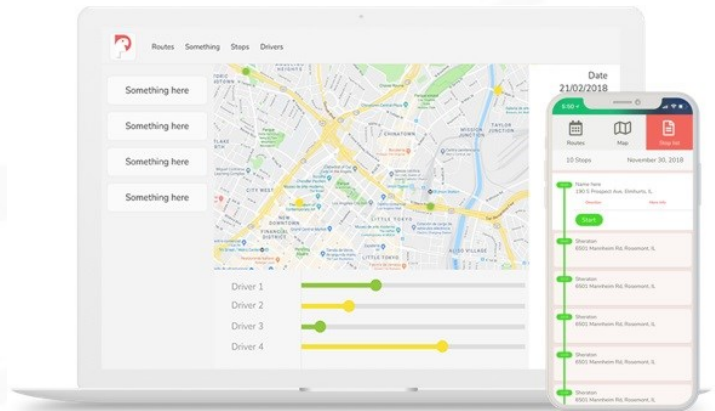

Paroute is advanced technology. Thanks to the development of our own algorithm that solves the Travelling Salesman Problem (TSP) we provide a more integrated fleet management solution for the last mile delivery of goods and services for medium and big sized business in Mexico, Canada and USA. We provide solutions for planning and route optimization and any other fleet management challenge.

Our Solution

Paroute provides an integrated solutions software taking into consideration constrains such as multiple route optimization, scheduling, fuel management, live vehicle and mobile app tracking, simulation, costume reports, API integration, in order to optimize resources and save time and money .

Our Clients

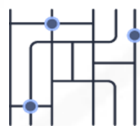

Distribution firms and logistics departments of manufacturing firms looking for Integrated Telematics Solutions to track overall fleet efficiency (route planning and optimization for multi delivery routes), and fuel costs in order to adjust their operations to their assigned budget.

How it works

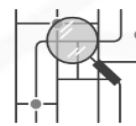

1. Input your fleet information

2. Plan and optimize your routes

3. Send assigned routes to your drivers

4. Monitoring routes execution

5. Analyze and assess drivers performance
