

Our services are targeted towards any business that processes a lot of transactions daily that is seeking a faster and more efficient method of working on their reconciliation and cashflow process

Business Summary

SmartConcil is a web-based solution with the most flexible matching rules engine designed to create reconciliation processes according to the clients needs. The objective is to empower any company to track and match their daily transactions resulting from their operations against their bank accounts; providing an easy way to control cash flow and projections for the company while also helping the Financial Team (CEO,CFO) make effective and calculated decisions on their financial strategies to improve bottom line.

-  **Detect and Control incorrect Payments**, missing payments, fraud alerts, as well as unknown payments.
-  Keep **Operation team focused** on business operation by avoiding the performance of routine activities with high errors latency.
-  Generation of **Reports and Control Charts** on the Payments behavior, cash flow and projections
-  **Saving time** for reconciliation process, taking just a couple of minutes to know the result of the process.
-  Future implementations and features will include Artificial Intelligence and financial behavior planning.
